NEO Cart

Affordable solution for a large variety of treatment situations

The NEO Cart can be used as a stand-alone unit or together with a NEO patient chair, suction head and a cuspidor.

Wide range of height adjustment (77 – 97 cm) allows for an optimal working height and storage, even when space is limited. With an electric motor, the height adjustment is fast and easy.

With its convenient wheels, the stylish, elegant Fimet NEO Cart is easy to move around. This mobility makes it ideal for surgical procedures, as well other uses where a working space needs to be easily converted for various purposes. The Neo Cart's integrated connection box saves space, eliminating the need for a separate floor box.

The large and steady tray offers plenty of space for setting down equipment and easy access to them during procedures. The tray can be moved in all directions as well as rotated around its own axis.

The painted, stylish surfaces are hygienic and easy to clean. Silicone covers are available for protecting the instrument bridge and tray.

A wide range of instruments are available for the NEO Cart, and the instruments can be arranged in the desired order.

Fimet NEO is a registered trademark of Fimet Oy.
